**Catalogue of Star
Clusters and
Associations**

Catalogue of Star Clusters and Associations

42 pp., 783 cards, [E]

Kčs 140,—

This Catalogue is intended to be a convenient working instrument for cluster and association research. Convenience, in such a case, must comprise easy accessibility, comprehensiveness and reliability. The question of easy accessibility has been solved successfully by presenting the Catalogue in the form of a card index. Comprehensiveness has been achieved by collecting the material from all the available sources. And reliability rests on the precision of the quotation in the Catalogue and on a careful revision of the proofs. The Catalogue consists of three parts, the first of which comprises 576 open clusters on 600 cards marked OCl., the second 46 star associations on 47 cards marked Ass., and the third 117 globular clusters on 136 cards marked GCl. The first part was prepared by G. Alter, the second by J. Ruprecht, and the third by V. Vanýsek. The cards include, in a very concise form, all the available information, so far published, about the properties of the objects. The first line on each card contains the designations of the object. The second line gives the positional data: equatorial co-ordinates, Epoch 1900.0, precession in R. A. and Dec. for 50 years, galactic co-ordinates, Epoch 1900.0 and the cosines. The third line contains the headings of 13 columns, corresponding to the papers referred to and to the properties of the objects. They comprise the year of publication, the author's name, the publication, data about angular diameters, distances, linear diameters, star numbers, star magnitudes, colour indices, spectra, star positions, total magnitudes, and remarks. The character of the Catalogue offers every possibility of extension, for every card can be implemented by further entries, and a number of empty cards are supplemented for such amplification. This publication appears to be the first attempt ever made, in natural science, at publishing collected material in card form.

PHYSICS
ASTRONOMY**Results of
Geomagnetic and
Ionospheric Measure-
ments at Průhonice
Observatory near
Prague during 1956**

In the first part of the book Dr. Jan Bouška and Karel Bodlák report on the results of comparative measurements performed in co-operation with Polish and German geophysicists; a further chapter deals with the results of geophysical measurements at Průhonice Observatory near Prague during 1956. The second part of the book contains ionospheric measurements.

PHYSICS
ASTRONOMY**Surface Oxidization
of Metals and
Alloys in a Gaseous
Medium**

The monograph deals with problems connected with the corrosion of metals, which is one of the main problems of modern technology and is also important from an economic point of view. The author first reviews some laws of physics of solid matter, the knowledge of which is a condition for the explanation of the mechanisms of oxidization. He further describes the preparation of samples and the methods employed in studying oxidization experimentally. Then he explains the origin of layers of oxides under different conditions. Explanations are based throughout on the principles of modern physics of solid matter and theory is always confronted with experiments. The book gives a comprehensive view of the whole complex of problems concerned and may thus very well serve experts in the solution of specialized problems connected with the oxidization of metals; the book is written comprehensibly and the mathematics required is not too complicated, basic terms are explained in the first chapters; the book also points out problems that have not quite been solved and questions which are awaiting further research.

Schwarz Štefan

Základy nauky o řešení rovnic

Series Studie a prameny (Studies and Sources), Vol. 16, L. 80, 348 pp., 47 ill., [Sl], h. c. Kčs 28,—

**Principles of the
Solution of
Equations**

The book aims at explaining the fundamental principles of the theory of algebraic equations with one or more unknowns, and some methods of their numerical solution. The first part of the book deals with the basic qualities of polynomials and the solution of equations up to the fourth degree. The next part deals with questions connected with the numerical solution of equations. The last part contains the proof that equations of the 5th degree are insoluble and further deals with the construction of geometrical figures with ruler and compasses. The book is accessible to a wide circle of readers due to its simple and intelligible explanation of over 350 practical examples.

Vlasov N. A.

Neutrony

Translated by I. Chudáček, L. Rob and M. Rozkoš from the Russian original. Н. А. Власов, Нейтроны, published by the State Publishing House of Theoretical Technical Literature, Moscow 1955, Series Věda mění život (Science changes Life), Vol. 7, L. 8, 477 pp., 169 ill., 30 tables, [Cz], h. c. Kčs 38,—

ASTRONOMY

Neutrons

With increasing scientific and technical applications of neutrons, their study became the object of a number of original papers; thus a new field of physics was created, the physics of neutrons. N. A. Vlasov's monograph contains a systematic survey of that field of physics. It informs the reader about the fundamental qualities of neutrons, their sources, the methods of registration and ways of mutual effect of neutrons and matter; it does not deal with the fission of heavy nuclei. The book originated from lectures delivered by the author at the Leningrad University in the years 1946—1952; these were supplemented by material, published up to 1954. It acquaints the reader with the fundamental and primary facts of the physics of neutrons in the most accessible and illustrative way possible. References to world literature are up to 1954 and an index is attached.

**The Development of
the Investigation of
the River Terraces
in Bohemia, Moravia
and Silesia**

Vývoj výzkumu říčních teras v českých zemích

*Published by the Central Geological Survey, series
Knihovna ÚUG, vol. 32, L 80, 290 pp., 1 fig., 33 pls.
(Cz), p. c. Kčs 16,70*

The paper presents a survey of the results obtained so far in the investigation of river terraces, i. e. early river deposits in Bohemia, Moravia and Silesia. The introductory chapters review the theoretical questions such as the development of the investigation and its periodisation, the opinions on the origin of terraces, the comparison with the main European rivers and the author's evaluation of the literature published up to the present. The main part of this book deals with individual rivers, chronologically summarising in briefest from various views and citing the literature concerning each river in question; it includes comparative tables of the terraces according to the views of individual specialists. The final part of the paper consists of a comprehensive list of the literature studied, including papers dealing with the problems of the river terraces in Bohemia, Moravia and Silesia, issued up to 1956; of the foreign literature several papers are cited which are of importance in comparison or solution of theoretical problems. The paper is supplemented by numerous tables and maps, illustrating the present state and the periodisation of the investigation of the river terraces of the individual water courses.

Führer zu den geologischen Exkursionen in das Barrandium

**Guidebook for the
Geological Excursions
into the Barrandian
Area**

Publication issued on the occasion of the International Geological Conference held in Prague in 1958. Detailed descriptions of the individual excursions are supplemented by stratigraphical and paleontological tables, small geological maps, sections and a series of photographs. The results of recent geological investigation in the Paleozoic basin of Central Bohemia are summarised here. The guidebook issued in the Czech language appeared already in the first quarter of this year.

Barrandian. Geology of the Silurian and Devonian of Central Bohemia in Pictures

The publication has been issued on the occasion of the International Geological Conference in Prague in summer 1958. It is a book of pictures which in popular scientific form makes the reader acquainted with the geological past of the Massif of Bohemia at the time of the early Paleozoic. It sketches the development of the investigation of this area from the period of the famous French scientist Joachime Barrande up to the present time and also presents in great detail Barrande's biography. By many photographs the book acquaints lovers of nature with the most interesting documents of the structure and beauty of the vicinity of Prague. In the Czech literature this is the first publication in the field of Geology which unites the results of scientific investigation with a popular scientific interpretation, presented mainly by evidence furnished in pictures. For the Czech reader the paper offers not only instruction, but it also represents an illustrated document, showing the gradually vanishing beauty of the region; it will be a valuable aid for foreign scientists, who more and more frequently come to see the Barrandian as a classical area for geological and paleontological research.

Trilobiti českého středního kambria

*Published by the Central Geological Survey, series
Rozpravy ÚUG, vol. XXIV, L. 40, 330 pp., 46 text
figs., LXVI pls., (Cz, e), p. c. Kčs 49,50*

Scientific monograph from the sphere of geology which arose on the basis of the scientific investigation carried out in the Central Geological Survey. All the representatives of trilobites (extinct class of Arthropoda) of the Cambrian, i. e. the earliest Paleozoic group, are described and illustrated in this paper. Further the evolution of some species of trilobites from the youngest larval stages up to the large adult forms is described here from material which for the present has no analogue in the world. In this work the author summarises our knowledge of the above-mentioned subject, critically evaluates all the papers published since 1872 and presents all his own new findings. The text of the publications is supplemented by collotype plates, on which all the trilobites of the Cambrian of Bohemia are illustrated, and by text tables as well as by indexes of authors and titles.

Chemie organických sloučenin fluoru

*Series Knižnice Studia a prameny, vol. 27, L. 80,
360 pp., 39 figs., (Cz), h. c. Kčs 38,50*

Chemistry of Organic
Fluorine Compounds

This publication is intended to offer the reader in a well-selected form practically all important information necessary for laboratory work in the field of organic fluorine compounds. The subject matter has been divided into ten chapters. In the introduction, the author deals briefly with the history of fluorine chemistry, with the nomenclature, and with safety measures in laboratory work. The chapter on materials for apparatus construction treats corrosion and resistance of various materials against fluorine and hydrogen fluoride. In the chapter on fluorinating agents, the author describes the preparation of the most important. Further he describes in considerable detail the methods of introducing fluorine into organic compounds; in the chapter on the preparation of organic fluorine derivatives he deals only with the reactions actually used for the preparation of the basic types of fluorinated compounds. Most thoroughly the author treats the chapter on reactions of organic fluorine compounds, systematically describing the reactions of fluorinated derivatives. A brief chapter on organic reagents is devoted to the application of some fluorine derivatives to chemical reactions. Comparatively much space is given to the part on physical and physiological properties of organic fluorine derivatives. Analogy with and differences from fluorine-free compounds are represented as far as possible in the form of graphs. Then the author pays attention to the methods of determining fluorine in both inorganic and organic compounds. Finally, in the part on practical applications the author considers from the technological viewpoint those fluorine compounds which represent objects of chemical manufacture. In contradistinction to the usual treatment of these subjects, the book contains a very detailed chapter on physical properties and chemical reactions of organic fluorine derivatives.

Zakořeňování a štěpování ovocných rostlin

2nd edition, Ovocnická edice, L. 80, 262 pp., 163 fig., (Cz), h. c. Kčs 20,—

This book deals with both customary and new methods of propagating fruit trees and bushes by cuttings, grafts etc. It is based on the authors' research work and their long experience in this field. The 1954 edition, which is now out-of-print, has been expanded in this new edition. The first section deals with hitherto unusual methods of striking, which may prove to be of great importance in practice. In a further section a survey is given of all established methods of striking. Detailed attention is given to fruit stocks and their propagation and to their influence on the graft and vice versa. In the chapter on grafting theoretical as well as practical questions are considered. An important new chapter deals with the budding of walnuts in the glasshouse and the striking of woody shoots of dwarf stocks. Methods of propagation using growth stimulants include some, such as the preliminary preparation of cuttings by etiolisation of the base used in the striking of peach and apricot cuttings on a large scale, which have not been published previously either in Czechoslovakia or other countries.

TECHNOLOGY

**Papers of the
Institute of
Electrical Engineering
of the Czechoslovak
Academy of Sciences,
VII.**

The papers published in the collection deal with problems in the field of power-current engineering, relating mainly to high-voltage, surge phenomena, phenomena in insulators, and further to rotary electric machines and transformers.

Contents: Bedřich Heller, Bedřich Paderta: Surge phenomena in a cylindrical winding with many turns. — Ant. Veverka, Jiří Chládek: Instrument for ionisation measurement — Rud. Loos, Jiří Pelnář: Amplifier of the voltage impulses of the instrument for ionisation measurements — Ant. Veverka: Initial corona voltages of sliding arrangements — Bedř. Paderta: Protection of a regulating transformer set against voltage — Václ. Hamata: Theoretical fundamentals of electrostatic instruments — Miloš Štafl: Screening of the magnetic field by a ferromagnetic tube — F. Provazník: Grooved ferromagnetic cylinder of finite length in a rotary magnetic field — Jar. Štěpina, Jiří Bendl: Eddy current losses in the rotor at asynchronous start of a turbomotor — Jar. Štěpina, Jiří Bendl: Braking of asynchronous motors by D.C. current — Jiří Čemus: Negative resistance as element of an A.C. model — Václ. Kubec: Compensated quick-acting magnetic amplifier for servo-systems.

Rozbor výrobní a hospodářské činnosti strojírenských podniků

Scientific editor Prof. Ing. Dr. Frant. Brabec; Symposium of the Czechoslovak Scientific-Technical Society for Mechanical Engineering of the Czechoslovak Academy of Sciences, Vol. 2, L. 8, 190 pp., 47 figs., (Cz), p. c. Kčs 9,70

**Analysis of the
Productive and
Economic Activity in
Engineering Works**

Collection of original papers which are the result of the scientific research activity of the Chair of Economics, Organisation and Planning of Engineering Works at the Faculty of Economic Engineering at the Czech Technical University at Prague, edited by the Scientific-Technical Society for Mechanical Engineering at the Czechoslovak Academy of Sciences. The collection presents theoretical solutions of some general economic problems of machine manufacture with the aim to improve methods of management. Some of the findings and conclusions, however, may be applied to industrial production in general.

From the contents: F. Brabec: Contribution to the study of the productive and economic activity in engineering works — J. Štolcpart: Contribution to the study of the fundamental interdependences on production lines — F. Schrobil: Economic effectivity of modern engineering.

Růzha Zdeněk

Elektrické odporové tensometry

*Series Studie a prameny, Vol. 19, L. 80, 236 pp.,
177 figs., 2 suppl., (Cz), h. c. Kčs 28,50*

Electric Resistance Tensometers

The book summarizes all principal knowledge and experience on measurements of the magnitude and course of deformations of single parts and whole structures by means of electric wire resistance tensometers. Tensometers are nowadays employed in all fields of engineering, because measuring by means of resistance tensometers also permits the determination of dynamic stress, and the small dimensions of the pick-up render these instruments suitable for application also in difficultly accessible places. The author devotes the first pages of his book to a survey of the methods employed for measurements of very small length variations and thus also for stress determination. Then follows an explanation of the principle of action and a description of the properties of electric resistance tensometers. In further chapters, the author deals with tensometer installations and rosette-type pick-ups. The text of the work is supplemented by schematical set-ups, diagrams, nomograms, and photographs of instruments; the pertinent literature is cited up to the year 1956; looking-up of individual items is facilitated by a subject index.

Větrání. Čistění plynů

Symposium of the Czechoslovak Scientific-Technical Society for Sanitation and Air Conditioning of the Czechoslovak Academy of Sciences, Vol. 2. Scientific editors Ing. Dr. Ladislav Oppl, Prof. Ing. Dr. Jan Pulkrábek. L. 80, 120 pp., 64 figs., (Cz, e, f, r, g), p. c. Kčs 9,40

Ventilation. Gas Purification

This publication presents original papers from the field of ventilation and gas purification, dealing throughout with endeavours to improve the atmosphere in both individual plants (contributions by Ing. Dr. L. Oppl and Ing. Dr. J. Cihelka) and in industrial regions (contributions by Ing. O. Štorch, Ing. Dr. V. Pražák a Ing. O. Miczka). The actuality of these problems is endorsed by tasks set by the Government for the improvement of sanitary conditions in the regions of Ostrava and Ústí, as well as by difficulties arising also abroad in eliminating the consequences of growing industrialization, such as the influences of increased dust content and industrial pollution of the atmosphere, which affect human health, vegetation, etc.

Numismatický sborník V.

Edited by the Historical Institute of the Czechoslovak Academy of Sciences, its Commission for Numismatics; editor Emanuel Nohejlová-Prátová. L. 80, 364 pp., 53 ill. and maps, XVI tab. on art paper in suppl., (Cz, rum., p. r. f), h. c. Kčs 46,50

Collected Studies in Numismatics, Vol. V

The volume includes papers dealing with various branches of numismatics. It is divided into two parts, one includes original papers, the other the description of findings. All contributions are the results of research of many years; the papers deal with Celtic history, ancient, medieval and modern history and with numismatic lists. The second part of the volume contains the description of 17 new findings of coins, ten of which are lists of groups of findings in Slovakia. Every paper is complete with a detailed apparatus of notes, numerous illustrations, maps and figures.

Contents: J. Winkler (Cluj): About the coins of the Daci and Géli — Zd. Nemeškalová-Jiroudková: The coinage of the Alexandrian mint in the first three centuries A. D. among Czech and Moravian findings — R. Kiersnowski (Warsaw): Czech coins in Pomerania in the early Middle Ages — J. Pošváf: Outline history of the Brno mint — A. Ruml: Moravian government coins in the Thirty Years War — J. Schenk: Mining in the Banská Bystrica region depicted on medals, jettons and value-stamps. — J. Petrtýl: The economic background of the Czech relief money-orders in the years 1848—1849 — J. Skutil, A. Malá: List of medieval and modern findings of coins in Moravia — Findings.

Přehled československých dějin. Díl I. Do roku 1848. Maketa

Edited by the Historical Institute of the Czechoslovak Academy of Sciences. Editors: Corresponding-member Josef Macek, Dr František Graus, Dr Jan Tibenský, editorial secretary Dr Jiří Spěvák. L. 80, 956 pp., 143 ill., 13 maps, (Cz), h. c. Kčs 42,—

Survey of Czechoslovak History. Part I: From the Beginning to 1848

The collective work of the foremost Czech and Slovak historians is based on the theses presented for public discussion in 1956. The authors expect that the present Survey of Czechoslovak History will lead to further wide discussion of Czechoslovak history. The discussion should also deal with the question of the

HISTORY

character of a university textbook for history, the second part of which will lead to 1918, the third part to 1938 and the fourth from 1938 to the present. The discussion should also touch upon the problem whether the present Survey, which is the result of the joint work of a large group of historians, meets the needs or whether it would be better to reduce the number of authors and have a smaller group of historians write the history on the basis of the collected material. This publication of the Survey responds to the urgent call for a Czechoslovak history which would be more than a secondary school-textbook and which would be written in such a way as to be not only of interest to specialists also to the wider public.

Aristoteles

Kategorie. První část souboru logických spisů Organon

Translated from the Greek original Aristoteles Kategoriai, edited by Im. Bekker (Aristoteles graece, Volumen prius. Academica Regia Borussica. Berolini 1831) by Dr. Antonín Kříž. The author of the introductory study is Dr. Karel Berka. Notes and comments by Dr. A. Kříž and Dr. K. Berka. Edited by the Institute of Philosophy, Series: Filosofická knihovna. L. 80, 80 pp., (Cz), p. c. Kčs 5,—

The Categories. First part of the collected works on logic Organon

The translation of the Categories gives the Czech public the opportunity to acquaint themselves with the first part of the logic writings of the greatest ancient philosopher, Aristotle of Stageira (348—322 B. C.). Aristotle's writings on logic, known under the collective title Organon, as well as his other philosophical writings are one of the fundamental pillars of human civilization. In it Aristotle outlined the firm gnoseological principles of logic and created the first integral system of logic which we call today the system of logic notions. In connection with the state of science in his times and on the basis of his philosophical predecessors Aristotle solved the universal problematics of notions which is closely linked with his theory of categories. This theory is the link between Aristotele's philosophy as it is outlined in his Metaphysics and his logic system built up particularly in the First Analytics. Aristotle's conclusions are not only an ancient document in the history of logic, but also prove the endeavour of the ancient thinker to make progress in the sphere of recognizing the relationship between the perceived and thought object and the perceiving subject. This small work deserves our attention even today and its study is instructive for everybody interested in philosophy.

Valid Judgment (res iudicata) and its Enforcement in Penal Cases

This work deals with the most important problems of penal procedure. On the background of the historical development of the institution of valid judgment (res iudicata) the author shows that this institution was adjusted in the legal order of every social-economic formation in such a way as to contribute most effectively to its aims. He then proceeds to analyse critically the

bourgeois theories of valid judgment and comes to the conclusion that these theories helped to conceal the class bias of bourgeois law. The author then explains the social-political significance of legal judgment in the Czechoslovak penal code and gives a detailed analysis of the valid form of this institution in present-day Czechoslovak law. In conclusion of his treatise the author tries to solve the problem of relationship between legal judgment and the enforcement of judgment.

**Kertchan Vases in
Czechoslovak
Collections**

This work aims at publishing all Kertchan vases existing in Czechoslovakia. At the same time it discusses in general the ancient ceramic production in the 4th cent. B.C. None of the relics of this kind have hitherto been published in Czechoslovak collections. The work is divided into three sections. In the first the author outlines the historic background against which ceramic production developed in Athens of the fourth century B.C., and the places to which these vases had been chiefly exported. According to the richest finding place of this type of vases they were called Kertchan vases. The second part deals with Greek vases of the 4th century B.C. in general and considers the relations of these vases to the ceramography of the preceding period, the aesthetics of their decoration, their ikonography and ikonology, their dates of origin and an evaluation of their place in the history of art. The last part of the book, the most extensive part, discusses Kertchan vases existing in Czechoslovak collections; this is followed by their detailed description, their date of origin and their place in the history of art. Numerous photographs illustrate the second part or accompany also the third part often in great detail.

Sections I and II**

The Dictionary of Literary Czech will be published in three volumes (Vol. I: A—M; II: N—Ř, III: S—Ž), each volume of cca 1000—1200 pp. The new dictionary will contain the description of the literary word stock of present-day Czech, based on scientific research, but aiming at easy comprehension for everybody. Each item will give the meaning, phrases and idioms pertaining to each word selected from a great wealth of material; it will also state its spelling according to the new Czech spelling rules, its standard pronunciation, especially of words taken over from other languages; further will be quoted the forms of flexible words, phrases of verbs and prepositions, verbal prefixes pertaining to each verb and reference to the corresponding perfective or imperfective verbs. The dictionary will inform about the stylistic value of words and their meanings, about technical terms and phrases, archaic forms and phrases, about rare, expressive, bookish and poetic, regional, dialect, slang and argot expressions; all these will be included only if they appear in outstanding works of Czech writers. The dictionary will mention the source of origin of word-borrowings. The dictionary is to appear in sections of about 100 pp., subscription for the first ten sections is 75 Kčs; upon completion of each volume the subscribers will receive gratis hard covers.

Verše bolesti, posměchu i vzdoru. Z časové poesie lidové a pololidové 17. a 18. století

Edited by the Institute of Czech Literature in the series Monuments of Old Czech Literature (Památky staré literatury české), vol. 20. Compiled and introduced by Dr. Zdenka Tichá, 80, 156 pp., 13 ill. in supplement, (Cz), h. c. Kčs 12,60

Verses of Affliction, Mockery, and Defiance. From topical popular and semipopular Czech poetry of the seventeenth and eighteenth centuries

Topical literary compositions, created on the occasion of certain events or situations, undoubtedly have been alive among the people from ancient times, but their development can be consistently traced only from the Hussite period. The work is an anthology of verse of that type embracing roughly the period after the Battle at the White Mountain in 1620 until the beginning of the national revival. The respective verses have in common the various situations to which they react. Their variety of forms bear witness to the creative force of the authors. An important group of verses meant for oral recitation consists of paraphrases of prayers among the song compositions the most important are Protestant songs, chapman's songs and purely popular songs.

All these verses prove how vain was the endeavour of the counter-reformation to destroy the Hussite tradition among the Czech people. Its force and vitality which incited the oppressed into many revolts, definitely resounds from the topical poetry of this period and still excites our admiration.

Treatment of Syphilis
 of the Nervous
 System with
 Penicillin

The author submits a report on examination and treatment of a series of 243 patients suffering from syphilis of the nervous system as well as a certain number of mentally diseased individuals in whom the underlying illness was lues latens. Some of these cases, treated with penicillin, have been followed up for a period of over ten years. The author compares the results of treatment with penicillin with those obtained in the times before the advent of penicillin.

From the contents: Preface. Introduction. The Development in the Treatment of Syphilis of the Nervous System. Congenital Syphilis of the Nervous System. Acquired Syphilis of the Nervous System. Discussion and Summary of What Has Been Hitherto Learnt about Syphilis of the Nervous System. Conclusion.

Vegetačné pomery okresu Štúrovo

L. 80, 320 pp, 40 figs., (r, g), p. c. Kčs 27,—

Vegetation Conditions of the Štúrovo District

In the first part of the above study Dr. B. Holubičková gives a description of natural conditions of the Štúrovo district, presents a survey of the types of wooded areas and plant families as well as a survey of the single kinds of tree growing on that territory, drawing from all this material economic conclusions which are of significance for practical work.

In the second part Dr. A. Kropáčová concerns herself with ecologic factors in the typology of meadows and pastures in South Slovakia. She presents a survey of the working and ecological methods as well as a survey of the ecological conditions prevailing in that territory. She also enumerates the species bidding fair for cultivation in those meadows and pastures, and presents a table showing cultivation values of species in the single ecologic stages.

Pestovanie marhúl a ich predčasné hynutie

L. 80, 320 pp, 129 figs., (r, g, f, e), p. c. Kčs 30,50

Cultivation of Apricot Trees and Their Early Dying

The above study is a summary of what has been hitherto learnt, in this country and abroad, about cultivation of apricot trees, special attention being devoted to the explanation of causes of their early dying.

The first chapter gives a survey of the actual state of cultivation of apricot trees in different European countries (Czechoslovakia, USSR, Hungary, Yugoslavia, Austria, Bulgaria, France) and in China. The second chapter deals with graft-carriers. Same contains contributions the purpose of which is a preliminary evaluation of local varieties of plums as potential graft-carriers for apricot trees, as well as a discussion of the question of their selection. In a further chapter the authors concern themselves with reproduction of apricot trees. In the fourth chapter there are, besides a contribution to the theory of improvement with special reference to practical tasks, studies concerning improvement as well as the more important questions of agrotechnique. The fifth chapter treats of the harmful factors and the last chapter of the results, hitherto gained, of complex investigation of apricot growing localities.

Differential Equations.
Part II. Partial
Differential
Equations

The above work contains material from the field of partial differential equations. With its contents it is one of the most elaborate works from this branch of Mathematics in the whole world. Its theoretical part is illustrated by a great number of examples taken from Mathematical Physics and Technical Sciences. Most of these have been solved and in those remaining unsolved the result has been given. This book will prove an excellent facility for university students, technical staffs and engineers as well as specialists in the field of partial differential equations.

Contents: Introduction — On the Possibilities of Solution of Partial Differential Equations — Some Special Differential Equations — Differential Equations with Two Independent Variables — Partial Differential Equation of the First Order with N Independent Variables — Existence Proofs for the Solution of Partial Differential Equations — Partial Differential Systems of the First Order — Geometrical Consideration on Differential Equations with Two Independent Variables — Partial Differential Equations with Constant Coefficients of the Second and Higher Orders — The Theory of Solution of Linear Differential Equations of the Second Order with Variable Coefficients — Hyperbolic Differential Equations — Elliptic Differential Equations — Boundary Problems in Solving Elliptic Differential Equations — Some Parabolic Differential Equations in the Field of Heat Transmission — The Solution of Hyperbolic and Elliptic Equations with Three and Four Independent Variable Orders — The Fundaments of Integral Equations — A Brief Historical Survey of the Development of Partial Differential Equations — Bibliography — Index of Authors and Subjects.

Air-Entrained
Concrete

Taking a broad view of his subject, the author summarizes in the above monograph what has been hitherto discovered about air-entrained concrete and its properties, making use partly of his own experience, partly of experience acquired in several research institutes as well as on a great number of sites in this country, and finally availing himself of studies published abroad.

He discusses the theory of formation of air bubbles when mixing fresh concrete, as well as all factors having an influence on their size and their total volume in the concrete. He quotes the chemical composition of all known admixtures used in air-entraining abroad and in this country, as well as the directions for their application. Further, he discusses the influence of air-entraining on all the properties of fresh as well as hardened concrete, viz. consistency, coherence, workability, bleeding, strength, bond, modulus of elasticity, capillarity and resistance against aggressive influences. He pays careful attention to the various dosing devices for air-entraining, used on sites. This monograph is a contribution not only to the problem of improving the quality of the most used and most important building material — concrete — of the building industry of to-day, but also to the problem of making methods of building more economical, of increasing the durability and thus also the safety of concrete constructions.

PERIODICALS

Zváračský sborník

Annum 1957 (6th year), L. 8^o. Appears quarterly, 128 pp, containing photogr. illustrations, graphic tables, (Sl, r, g), annual subs.

Ro. 20,80 \$ 5,20 £ 1,17,0
